

Gracefully moving with a gentle aura, WING illuminates any space with a playful tease of light and shadows. The designer's keen eye and creative inspiration brought forth WING's exquisite "Dual lighting" feature. Its translucent dual-leaf diffuses light softly upwards, swaying elegantly to create a cozy and ethereal environment. Meanwhile, downwards, the high-performance LED CRI>95, and high-efficiency optical lens narrows the beam angle to provide ample illumination without glare for practical needs. With bold yet subtle design elements, WING strikes a beautiful balance between imagination and reality, seamlessly weaving light into a dynamic beauty any space would wish to embrace.
